Our utopia

More interoperability to build music recommendations / discovery systems

- **Music metadata**

- **tags**
- **genre**
- **description**

- **Wikipedia, wikidata, musicbrainz**

- **to create artists ban-lists**
- **to display artist description**
- **genre definition**
- **genre taxonomy**

3

Social web limitation

- **A need of centralization**

- **For genre definition**
- **For listenings analysis**

- **Economic model**

- **Is fragile**
- **Funkwhale is not a music distributor**

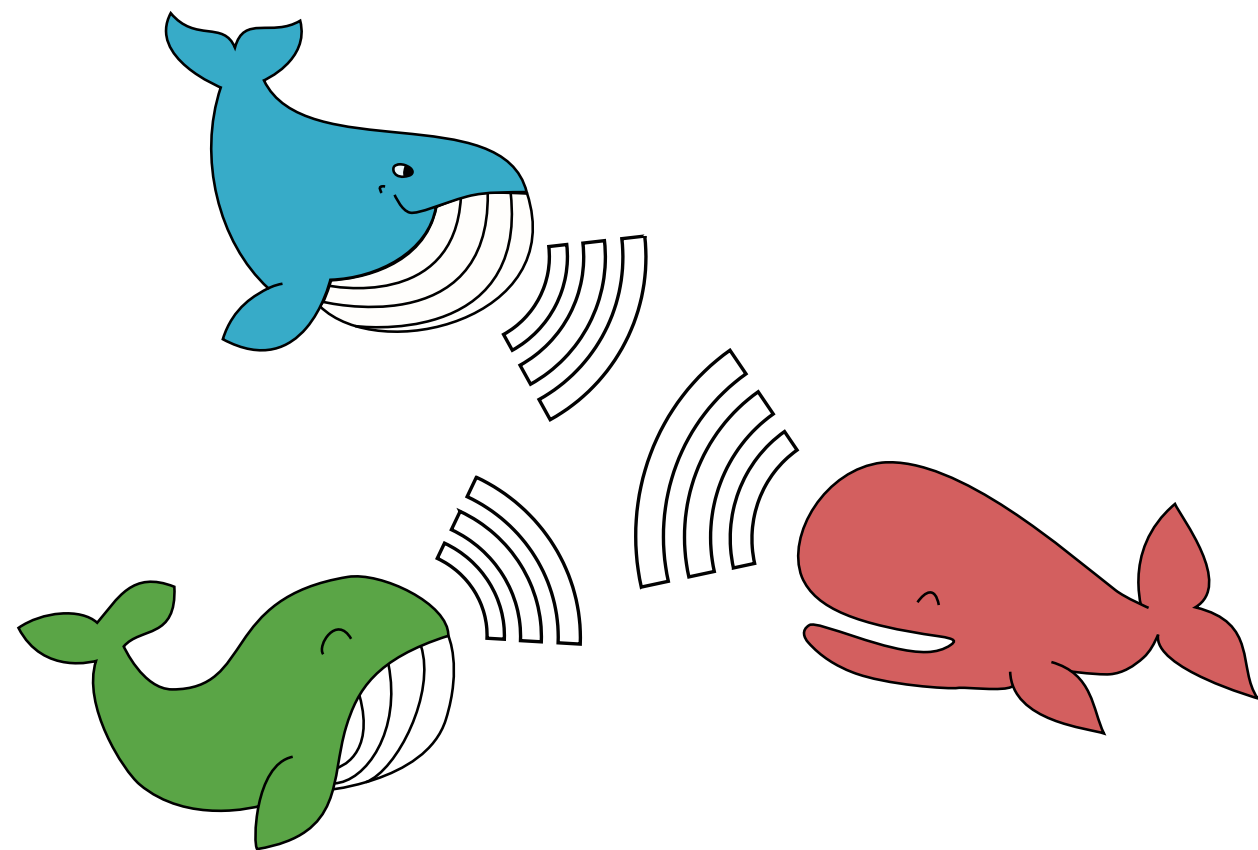

- **Interoperability is a political fight, not a protocol**
